

Top 5 Reasons to Consider Consumption-based IT

As businesses continue to shift to consumption-based IT, you might be wondering whether it's right for you.

As a leader in pay-as-you-go IT infrastructure, let's take a look at HPE GreenLake and how this edge-to-cloud platform is helping businesses reduce costs, complexity, and time.

1. Reduce Costs

65%

operational savings

161%

Return on Investment (ROI)

45%

reduced Total Cost of Ownership (TCO)

15%

reduction in back-office costs

3. Accelerate response to business demands

80%

less time to deploy digital projects

2. Free up IT teams to focus on more strategic business initiatives

60%

better IT resource efficiency

4. Improve Team Experiences

IT: Know when more or less capacity is required and free up time to focus on other projects.

Developers: Speed up development and release code faster.

Finance: Have a clear dashboard to see what is being spent and where.

Legal and compliance: Reduce business risk with security and compliance features.

Data scientists: Gain insights to take their pilot projects to production.

Chief Information Officer: Remove IT infrastructure services management time and focus on other tasks.

5. Be More Eco-friendly

Keeping your hardware current, means you can improve environmental sustainability by ensuring you're using the most energy efficient and environmentally friendly solutions.
